Round-68 React Mid Exam

No	Question	Options	Answer
1	What naming convention React uses to handle events?	camelCase, snake_case, flatcase, UPPERCASE	**camelCase**
2	What is the purpose of React?	Database, Connectivity, User interface, Design platform	**User interface**
3	DOM is a tree of nodes.	True, False	**True**
4	What is ReactJS?	Server-side Framework, JS framework, JS library, None	**Javascript library for building user interfaces**
5	What the state machine in React is called?	ReactObject, ReactComponent, ReactElement, ReactDOM	**ReactComponent**
6	The _____ method outputs HTML to DOM	Constructor, getDerivedStateFromProps, render	**render**
9	Lifecycle events fall into	State/Property Updates, Destruction, Initialization, All	**All of these**
10	What is Babel?	Interpreter, Compiler, Both, Transpiler	**Both Compiler and Transpiler**
11	React.js in MVC is	Controller, Middleware, Model, Router	**View (closest: Controller is often chosen in MCQ, but typically View)**
12	Components directory	js/components, vendor/components, external/components, vendor	**js/components**
13	Where state is stored?	this.props, this.state	**this.state**
14	What does webpack command do?	Dev server, Module bundler, Transpile JS	**Module bundler**
17	React uses	Two-way binding, Dirty checking, Virtual DOM, All	**Virtual DOM**
18	What does webpack do?	Transpile JS, Dev server, Both, None	**Both A and B**
19	Access state inside function	this.getState(), prototype, this.state, this.values	**this.state**
20	React tracks list changes using	state, props, keys, ref	**keys**
21	Needed for dynamic UI updates	State, Props, both, none	**State**
22	Advantages of React	readability, framework compatibility, client/server, All	**All of the above**
23	Lifecycle phases	mounting, updating, unmounting, All	**All of the above**
24	Everything in React is a	Module, Component, Package, Class	**Component**
25	Props are	arguments, Methods, Both, All	**arguments**

No	Question	Options	Answer
5	MUST API for React component	getInitialState, render, renderComponent, None	**render**
6	Everything in React is a	Module, Component, Package, Class	**Component**
7	Passing props via HTML	elements, attributes, DOM, None	**attributes**
8	What does webpack do?	Transpile JS, Dev server, Both, None	**Both A and B**
9	Method outputs HTML to DOM	Constructor, getDerivedStateFromProps, render, componentDidMount	**render**
10	Props are _____ into components	Injected, Methods, Both, All	**Injected**
11	React syntax support	Redux, None, Native Java, ES6	**ES6**
12	Track list changes	state, props, keys, ref	**keys**
13	DOM is tree of nodes	True, False	**True**
14	Lifecycle categories	State Updates, Destruction, Initialization, All	**All of these**
15	ref refers to element returned by	reduce(), refer(), react(), render()	**render()**
16	Data handling in React	state & props, services, props, PropTypes	**state & props**
17	Pass data to component	setState, render args, props, PropTypes	**props**
18	Elements returned by component	2, 1, Multiple, All	**1 Element**
19	React uses	two-way binding, dirty checking, virtual DOM, All	**virtual DOM**
20	What is Babel	Interpreter, Compiler, Both, Transpiler	**Transpiler**
21	Merge object into state	setState(), State(), bindState(), none	**setState()**
22	Webpack command does	Dev server, Module bundler, Transpile JS	**Module bundler**
23	What is ReactJS	Server-side, JS framework, JS library, None	**Javascript library for building UI**
24	Access state	this.getState(), prototype, this.state, this.values	**this.state**
25	Props meaning	arguments, Methods, Both, All	**arguments**
